Don't know what's up with the

Daylight Saving Time setting but it was not correctly fixed in new Photoshop version. It won't lose the time when you change the setting for Daylight Saving Time.At all. But, it's not the time that's lost. The lighting is still perfect but you have to manually change the time back and forth. This can be a disadvantage if you forget to do it or if it's set up on a server. For those using Adobe Photoshop Lightroom, I'm sure you didn't even notice it. Photoshop (and Lightroom) is still absolutely the best and most popular photo editing and management software available in the world. It is unbeatable. I'm happy that Adobe answers most questions and gives us what we want without leaving issues unresolved.

A photo editor is not the same as an automation tool. Automation requires more technical knowledge while a photo editor is more flexible. The tables above show the limited number of consecutive years when Adobe Photoshop has not been updated. The reason for a lag in software updates is difficult to derive because the release nowadays features a continuum of creative, artistic and technical development that keeps Photoshop among the best image enhancement apps for photographers and graphic designers. Yet, even so, these tables tell stories of Photoshop's (relative) longevity. Who knew the software that came with a Sony Walkman in 1985 was still afloat in 2017—an app that now rivals photo editing suites from Microsoft, Apple and Adobe. This is the powerful tool that continues to withstand evolutionary changes in technology and its strictly artistic nature that allows it to stand its ground among the superior tools of graphic design and photography. Thanks to the quality and stability of the PSD file format, it's not uncommon for designers to use Photoshop to finish their work on multiple websites at the same time. In the start of designing a certain website, it may look like a simple task of creating a header, typography, HTML and CSS. But an extra feature may still be necessary. For instance, you need to slice a big picture into many pieces or you need to optimize CSS for the best possible performance.
